

MICROLEARNING MODULE SAMPLE- INTRODUCTION TO AI

Duration: 5-10 minutes

Audience: Beginners (Age 10+ or adult learners)

1. Learning objective:

Learners will be able to:

- Define AI in simple terms?
- Identify real-life uses of AI?
- Distinguish between AI, ML(Machine Learning), and Generative AI

2. Introduction:

- What is Artificial Intelligence (AI)?

AI is a technology that enables computers to **think, learn, and make decisions** similar to humans.

Example:

- ❖ Google Maps predicting travel time
 - ❖ YouTube recommending videos
 - ❖ Siri / Alexa answering questions
 - ❖ ChatGPT generating text
- Difference between AI, ML, and generative AI

If **AI** is the **technology** that helps devices perform cognitive tasks like humans, then **ML** is the **technique** we use to achieve this.

ML- It's a way for machines to **learn from data** instead of being programmed with rules.

Generative AI is a type of AI that will create new content like text, image, audio or code.

- Where do we use AI?

- ❖ Google Photos identifying faces
- ❖ Netflix recommending movies
- ❖ Self-driving car lane detection
- ❖ Chatbots answering customer questions

3. Quick knowledge check

- What is AI in one sentence?
- Give two examples of AI you use daily.
- What is the difference between AI and ML?
- What does Generative AI create?

4. Summary

- AI helps machines perform tasks intelligently.
- ML helps machines learn from data.
- Generative AI creates new content.
- AI is already part of daily life — and growing fast.
