

Lesson 2: Working With Text in HTML

Course: Web Development Basics

Grade Level: Beginners (Age 10+ or adult learners)

Duration: 45–60 minutes

Lesson Number: Day 2

Topic: Working With Text in HTML

1. Learning Objectives

By the end of this lesson, students will be able to:

- Create paragraphs using `<p>`
 - Add line breaks (`<br>`) and horizontal lines (`<hr>`)
 - Use text formatting tags like `<b>`, `<i>`, `<u>`, `<strong>`, `<em>`
- Build a simple webpage containing properly structured text

2. Materials Required

- Computer / Laptop
- Online HTML Editors / IDEs:
 - Replit (<https://replit.com>)
 - CodePen (<https://codepen.io>)
 - JSFiddle (<https://jsfiddle.net>)
 - W3Schools Tryit Editor (<https://www.w3schools.com/html/tryit.asp>)
- Slides (optional)
- Teacher's notes & sample code

3. Lesson Overview (Teacher Notes)

This lesson introduces students to the building blocks of website content: paragraphs and text formatting tags. Students will learn how to organise information on a webpage and apply simple formatting like bold and italic. They will create a structured mini webpage with multiple headings and paragraphs.

4. Lesson Breakdown

➤ 4.1 Warm-Up (5 minutes)

Share the screen and display a page with only text (try to include a page with a heading, subheading, bold text, multiple paragraphs, line breaks, etc.)

Now ask students

- What do you notice on this page?
- How do you think this webpage was created?
- Do you think all this text is written in one line or many lines?
- If you had to create this webpage, what tools do you think you need?

➤ 4.2 Recap & Transition from Day 1 (5 minutes)

Explain: Today, we will learn more tags that help us write actual content on a webpage. Before that, we will review the topics from yesterday quickly.

- What is the purpose of `<html>`, `<head>`, `<body>`?
- What is a heading tag? Why did we use `<h1>` to `<h6>` yesterday?

➤ 4.3 Teaching Headings & Paragraphs (15 minutes)

Basic Structure

Guide students to type the code in any online HTML editor and run it to view the output.

```
<!DOCTYPE html>
<html>
<head>
  <title>Day 2 Practice</title>
</head>
<body>
```

```

<h1>The Clean Park</h1>
<p>Tyler asked his mom if he could ride his bike to the park. "As long as you wear
your helmet when you are riding," she said</p><p>When Tyler got to the park, it was
filled with people holding garbage bags. A lot of his friends were there, and so were
some of his teachers. His friend Bella
said, <br> "Everyone is pitching in and cleaning the park
today." She asked Tyler if he would help. Tyler said,
"Sure," and asked for a garbage bag. </p>
</body>
</html>

```

- Ask them about <p>, and

- How its working? Ask them to add more <p> and
 anywhere?
(wait for their response)

Then explain

- <p> - paragraph tag is used to write normal paragraphs, also remember
<p> = new paragraph → new line + spacing (between lines)
- Line breaks:
 (no closing tag)

 = only new line → no spacing (between lines)

➤ 4.4 Text Formatting Tags (10 minutes)

Make the kid type the following code

```

<!DOCTYPE html>
<html>
<head>
  <title>About Me</title>
</head>

<body>
<h2>About Me</h2><hr>
<p>My name is <b>John</b>.</p>
<p>I love <i>coding</i>.</p>

```

```
<p>This is <u>important</u> text.</p>
<p>I am <strong>John</strong>, a dedicated student who enjoys <em> making
websites creatively</em>. </p>
</body>
</html>
```

- Ask them to identify the new tags
- Let the kid guess the usage (wait for the response, then explain)
- <hr> - horizontal rule, to divide sections, no closing tag
- - make the text bold
- <i> - to make the text italic
- <u> - to add underline
- -Also appears bold, used when the information is **important** or **urgent**
- - Makes text italic. Used when you want to emphasize a specific word in a sentence.
- Ask the kid the difference of & with &<i>
- = bold (just design)
- = bold + important meaning
- <i> = italic (just design)
- = italic + emphasis (stress the word)
- Ask the kid to change the locations of the tag and explore.

➤ 4.5 Hands-On Coding (10 minutes)

Assign this challenge:

Ask students to create:

"About My Family" Webpage

Must include:

- One <h1> heading
- One <h2> or <h3> subheading
- One paragraph <p>
- Use at least 2 formatting tags such as , <i>, <u>

Sample (Teacher Demo):

```
<h1>About My Family</h1>
```

```
<h3>Introduction</h3>
```

```
<p>My family has <b>four members</b>. We live in <i>Kochi</i> and love spending time
together. </p>
```

➤ 4.6 Hands-On Coding (10 minutes)

Challenge Students:

Create a webpage about “**My Favorite Teacher**”

Include:

- Heading
- Paragraph
- At least 3 formatting tags
- Use `<br>` at least once

5. Assessment (Exit Ticket – Quick Check)

Ask students to answer:

- Which tag is used for paragraphs?
- Write any two formatting tags.
- What is the difference between `<h1>` and `<h4>`?
- What does `<br>` do?
- What is the difference between `<hr>` and `<u>`?
- What is the difference between the following pair `<b>` - `<i>` & `<strong>` - `<em>`

6. Homework / Extension Activity

Write an HTML page about **your hobby**.

Must include:

- One main heading
- One paragraph
- Bold, italic, underline
- A subheading
- A line break
