

ADDIE CASE STUDY

Title: ADDIE Model Case Study – Introduction to Loops (Grade 4)

1. Analysis Phase

- **Learner Profile**

- Target Learners: Beginners aged 8 – 12 years
- Background: New to coding, familiar with scratch basics.
- Learning Environment: Online, self-paced e-learning module

- **Learning Needs**

Learners often struggle with:

- Understanding repetition in coding
- Identifying different kinds of loops
- Knowing when and why loops are used

- **Learning Objectives**

By the end of this micro-course, learners will be able to:

- Define what a loop is.
- Identify different types of loops (Repeat, Repeat Until, Forever).
- Understand real-life examples of loops.
- Implement loops in Scratch.
- Explain how loops simplify coding.

- **Constraints & Opportunities**

- Must be compatible with Articulate Rise 360.
- Should include child-friendly visuals and interactive components.
- Require minimal typing; more visual and click-based learning.

2. Design Phase

- **Instructional Strategy**
 - Simple-to-complex sequencing
 - Real-world analogies first → coding examples later
 - Animations and click-to-reveal interactions in Rise 360
 - Reinforcement using a 5-question quiz
- **Visual & Media Design**
 - Clean, kid-friendly visuals
 - Scratch interface screenshots
 - Loop icons
 - Drag-and-drop interactions
 - 360° image exploration in summary screen
- **Assessment Strategy**
 - 5 Single Choice Questions
 - Feedback layers: Correct / Try Again
 - Quiz auto-advances on Continue
- **Storyboard Outline**
 - Intro → Loop Meaning → Daily Examples → Scratch Loop Blocks → With/Without Loop Comparison → Drag & Drop → 360° Summary → Quiz

3. Development Phase

- **Tools Used**
 - Articulate Rise 360.
 - Canva for icons & kid friendly illustrations.
 - Scratch screenshots.
 - Audacity for voice narration editing.
- **Built Components**

- Text & Audio Sync: On-screen text animates in sync with voice narration.
- Clickable Examples: Everyday loop examples appear when clicked.
- Scratch Loop Block Display: Real blocks shown for visual connection.
- Comparative Coding Screens: “With loop vs Without loop” to show code efficiency.
- Drag & Drop Activity: Learners match loop type → real-life scenario.
- 360° Interactive Image Summary: Markers clickable inside a Scratch-like environment.
- Quiz: Immediate feedback with “Try again” & “Continue.”

4. Planned Implementation Phase (Not Yet Executed)

- Published using Share link in Rise 360
- Also hosted link on GitHub Pages
- Tested on Laptop, Tablet & Mobile
- Share link with sample learners (students aged 8–12)
- Observe if learners can:
 - Navigate the slides
 - Use drag-and-drop easily
 - Correctly understand “Repeat Until”

5. Planned Evaluation Phase (Not Yet Executed)

- **Planned Formative Evaluation**
 - Internal review with a mentor or fellow instructional designer
 - Collect feedback:
 - Was the content clear?
 - Are examples age-appropriate?
 - Do interactions support learning?
- **Planned Summative Evaluation**
 - Post-quiz scores from learners

- A short feedback form with:
 - What did you understand about loops?
 - Which activity helped you the most?
 - Was the narration clear?
